2 Installation

2.1 General

The documentation of the program is found in the 'doc/' directory in the file 'latex2rtf.texi

4. make install
If your mkdir

DOS, Win3.1, Win95, Win98, WinME

Open the file 'C:\Autoexec.bat' either with Edit (DOS) or with Notepad (Windows).

At the end of that file, add the line

'PATH=C:\I 2r; %PATH%'

Save the file to its original location.

WinNT, Win2000, WinXP

Right-click "My Computer" (German: "Arbeitsplatz"), then select "Properties";

NT: Click the "Environment" tab;

XP: Click the "Extended" tab, then the "Environment variables" button;

Find the line beginning with 'PATH=' and insert the string

'C:\I 2r; '

so that the complete line looks like

'PATH=C:\I TH=C: WINDOWS; . . . TH%

3 Using LaTeX2RTF

4 Features

In this chapter you find what styles is $\text{\LaTeX}2\text{RTF}$ supposed to translate correctly to RTF.

4.1 $\text{\LaTeX}2\text{e}$

\LaTeX

4.4 Cross References

Cross references include everything that you might expect and then some: bibliographic citations, equation references, table references, figure references, and section references.

4.7 Graphics

There is now rudimentary support for `\includegraphics`. Three file types will be inserted into the RTF file without needing conversion: `.pict`, `.jpeg`, and `.png` files. EPS files are converted to PNG using

5.4 Ignore Command

The file 'ignore.cfg' is used for defining how to ignore specific commands. This file is used for recognition of \LaTeX variables, user defined variables, and some simple commands. All variables are ignored but the converter must know the names to correctly ignore assignments to variables. Lines in this file consist of a variable name with backslash, followed by comma and the type of the viable followed by ' '. Possible types are

'NUMBER' simple numeric value

'MEASURE' numeric value with following unit of measure

'OTHER' ignores anything to the first character after '=' and from there to next space.
e.g., \setbox\bak=\hbox

'COMMAND' ignores anything to next '\ ' and from there to the occurrence of anything but a letter e.g., \newbox\bak

'SINGLE' ignore single command e.g., \noindent

'PARAMETER' ignores a command with one parameter e.g., \foo{bar}

'PACKAGE' not produce a Warning message if PACKAGE is encountered, e.g., 'PACKAGE,kleenex.'

'ID' processes contents of unknown environment as if it were plain \LaTeX eg. 'ENVCMDE,environtext\end{environtext' as 'text'.

'ENVIRONMENT'

6 Error Messages and Logging

7 History & Copyright

LaTeX2RTF is only strolling from left to right through the text and can't remember what she will see in the future.

2. The diagnostics routine does not output the correct (actual) inputfilename. ('.aux', '.bbl', \input).

8.4 Reporting Bugs
